An Emission Reduction Program Idea Note for the Democratic Republic of Congo

Forest Carbon Partnership Facility (FCPF) Carbon Fund Fourth Meeting (CF4)

June 24-25, 2012
Santa Marta,
Colombia

Outline

1. Entity responsible for the management of the ER Program
2. National REDD+ Focal Point
3. Implementing Partners
4. Program Location and Life
5. Description of Activities Planned under the ER Program
6. Governance and Registry
7. Preliminary assessment of the ER Program in the context of the national SESA and the ESMF
8. Additional Social and Environmental Benefits
9. Benefit-Sharing Mechanisms
10. Stakeholder Consultation and Participation
11. Reference Emission Level (REL) and Expected Emission Reductions
12. Measurement, Reporting and Verification (MRV)
13. Progress on REDD+ Readiness
14. Financing plan

Implementing Partners

Partner	Role
Ministry of Environment	Program management entity through the National REDD+ Fund
UNDP MDTF	Interim Fiduciary management of the National REDD Fund
UN-REDD program	Technical advice in the design of the program and implementation of MRV system
WWF	Technical advice in the design of the program and implementation of local land use planning and
Local government and Rural Committees (CARGs)	Integration and approval of the land use plans and conflict resolution
Customary authorities and Legally recognized local community organizations (ASBL)	Implementation of village level land use plans and adoption of alternative livelihood strategies
Agricultural companies (NOVACEL, SEBO)	Implementation of agricultural/agroforestry alternatives and bush fire control
Legal logging companies	Forest Certification and shifting towards Reduced Impact Logging
Civil society: GTCR, RRN, CEDEN, ISCO Congo, Hans Seidel, Churches	Information, education and communications. Oversight and support for enabling activities
FIP, KfW, CBFF, USAID-CARPE, NORAD, AFD, EU	Donors already supporting investments in relevant enabling and sectoral activities

4. Program Location and life

FIP intervention Area

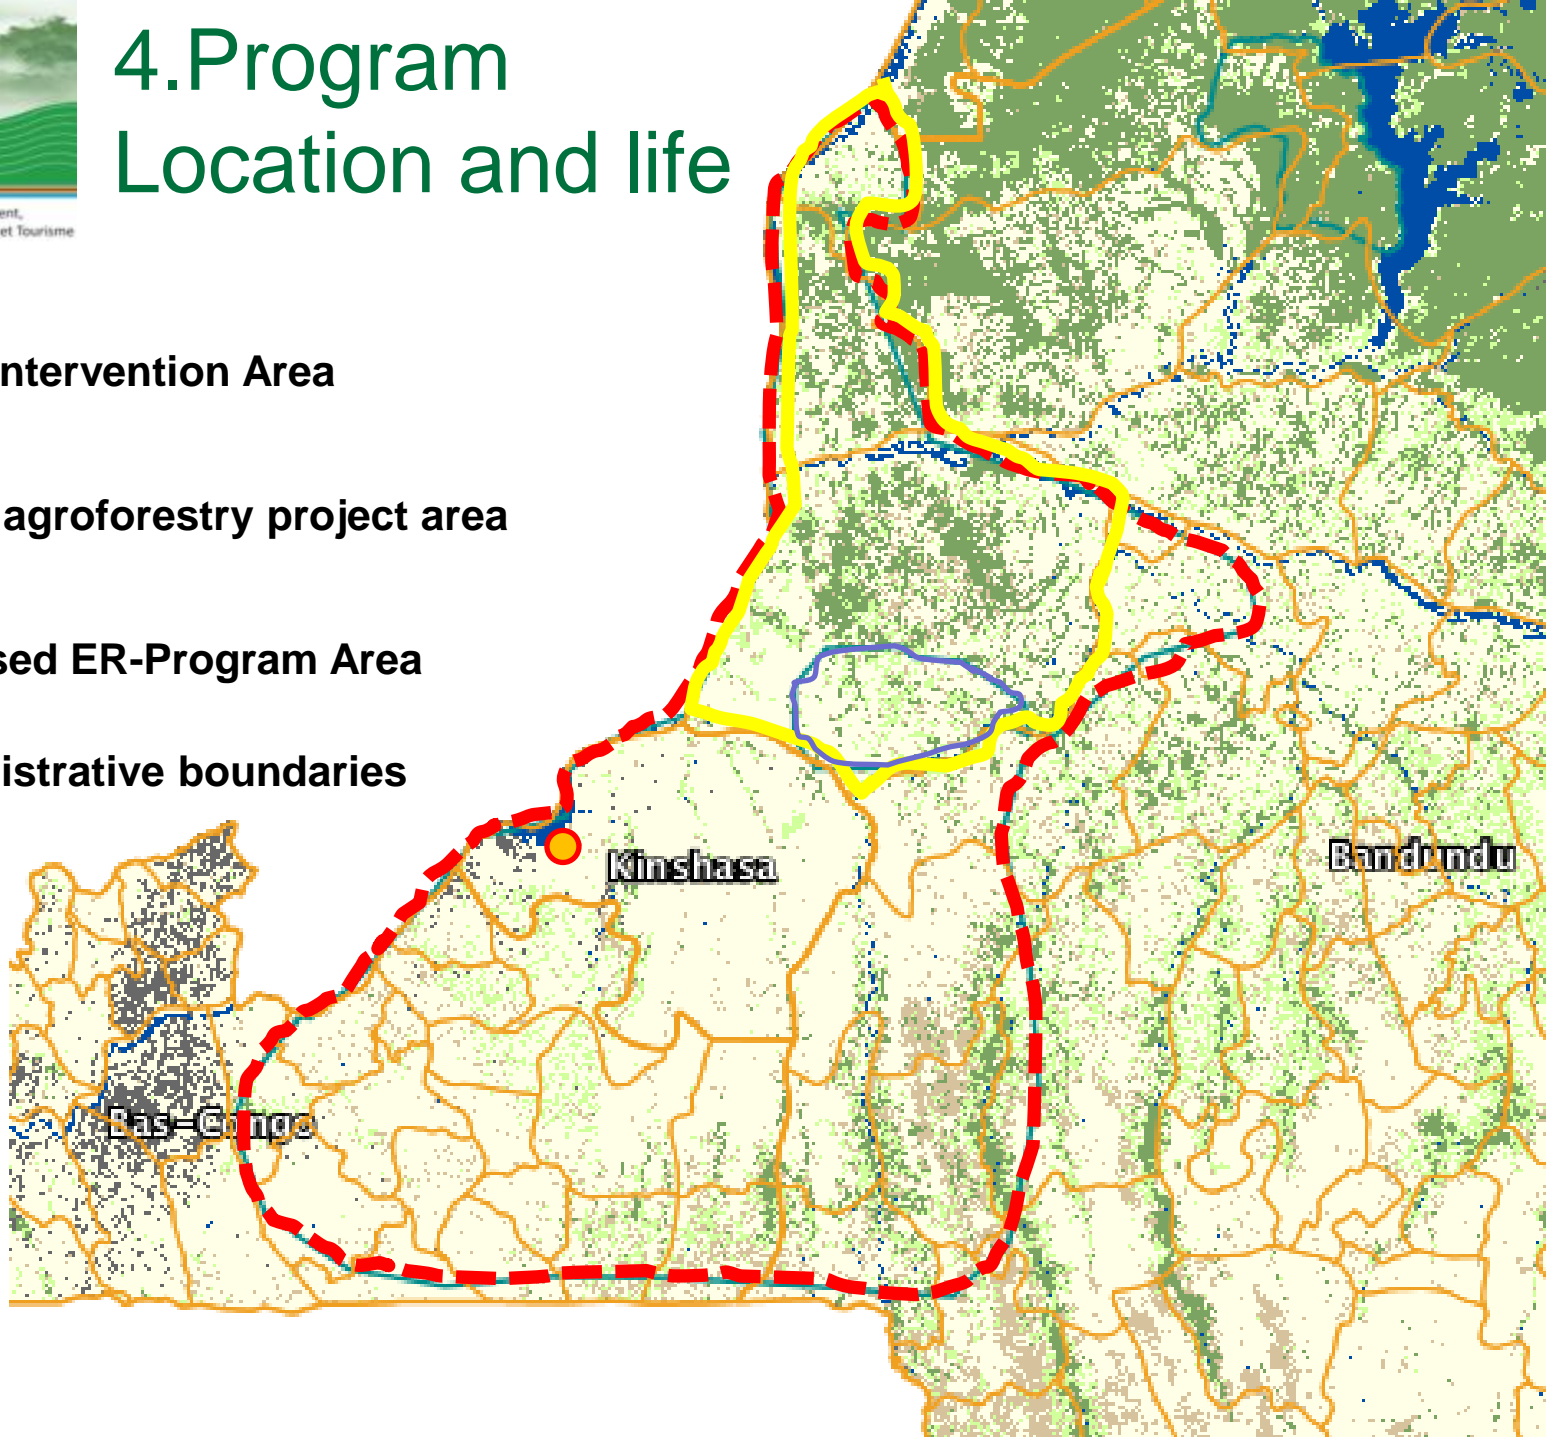

CBFF agroforestry project area

Proposed ER-Program Area

Administrative boundaries

4. Program Location and life

- 1.963.315 ha,
- 38,8 % covered by forests
- 438.350 ha primary
- 194.742 ha secondary
- 128.392 ha woodland savanna
- Deforestation between 2000-2010
= 75.058ha
- 0.94% annually or 1,9-2,9 MtCO₂

community based
land use planning

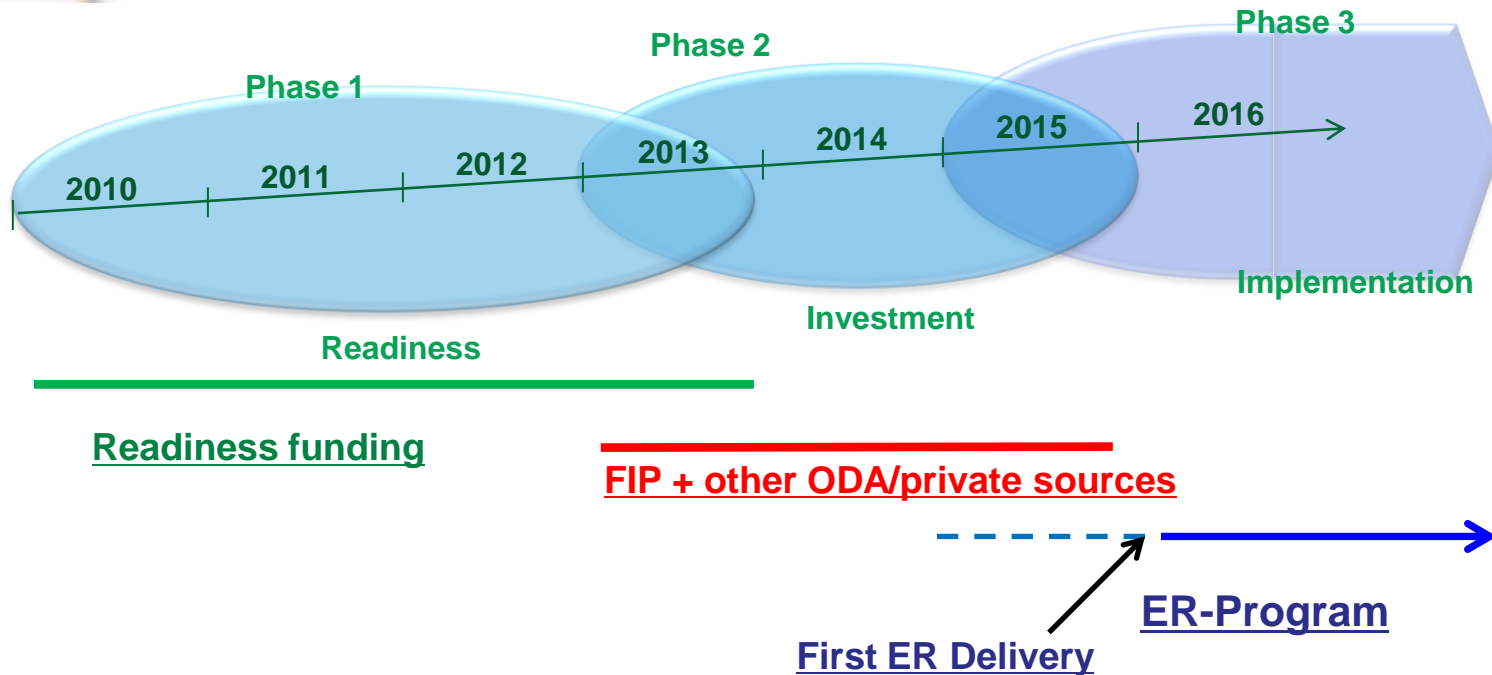

Proposed ER-
Program Area (2
million ha)

Agroforestry Project
(12,000ha long term
goal)

Kinshasa

Expected lifetime of the proposed ER Program

❖ DRC would prefer a longer term agreement (**10 years**)

➤ security about the future as government mobilises communities to embark on transformational change

➤ Time to further integrate into emerging national framework and most importantly advance on readiness.

5.1 Analysis of drivers of deforestation, degradation, and/or forest enhancement trends

Direct Causes

- Charcoal production to supply Kinshasa
- Slash and burn agriculture (subsistence and commercial)
- Cattle Ranching (large and small holder)
- Bush Fires

- Illegal logging
- Industrial logging

Underlying drivers

- Pop. Growth
- Land degradation
- Lack of alternatives
- Lack of governance
- Low productivity
- Transport network rehabilitation

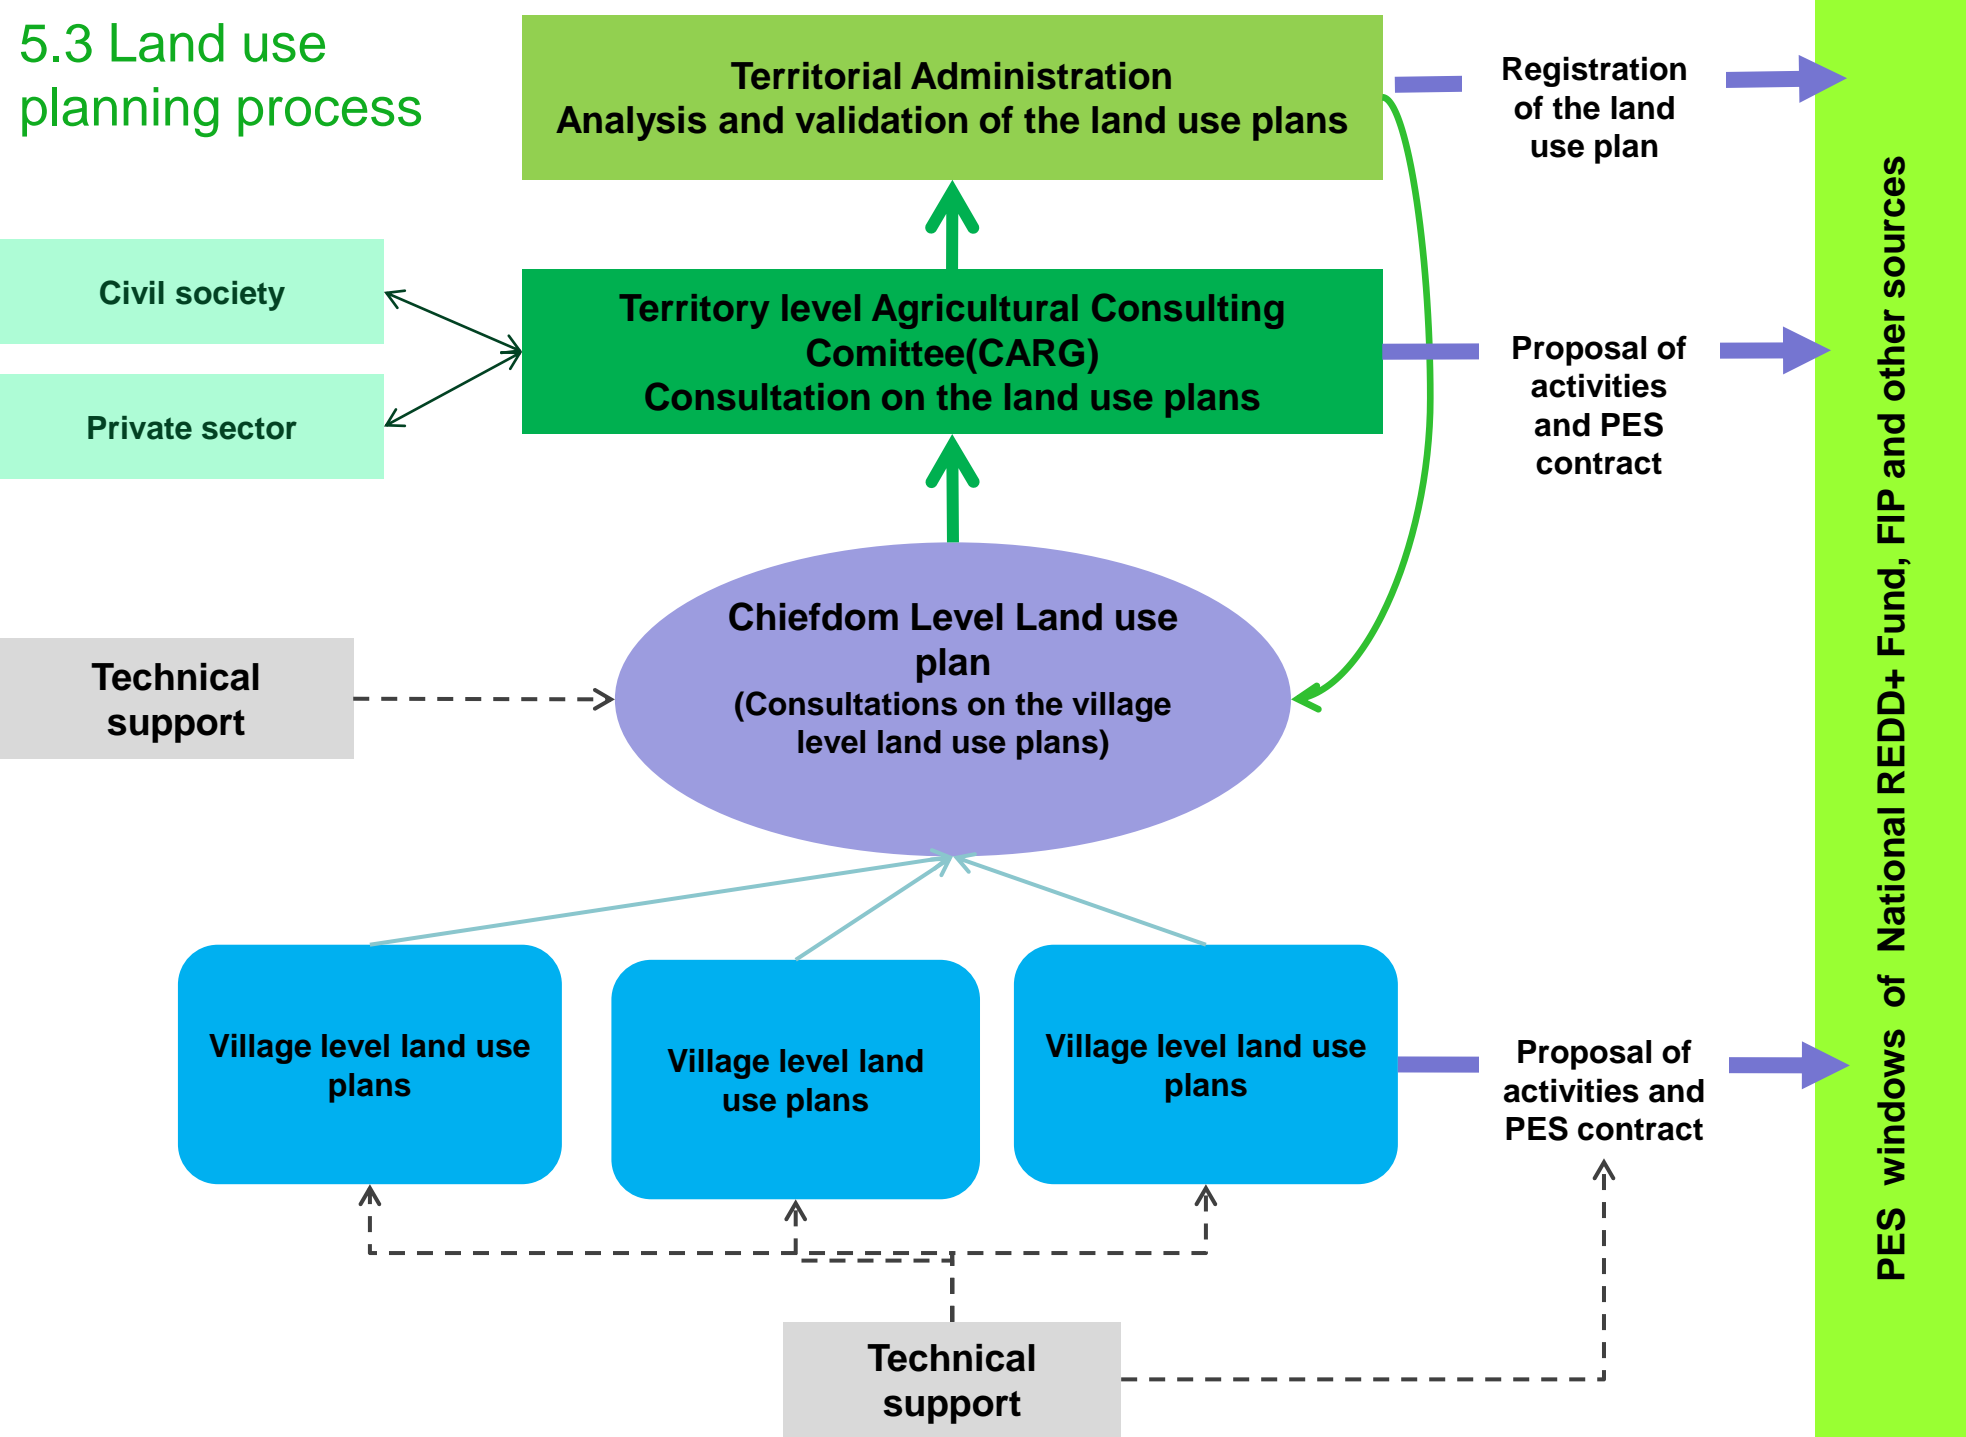

5.3 Enabling activities under the proposed ER Program: village level management plans

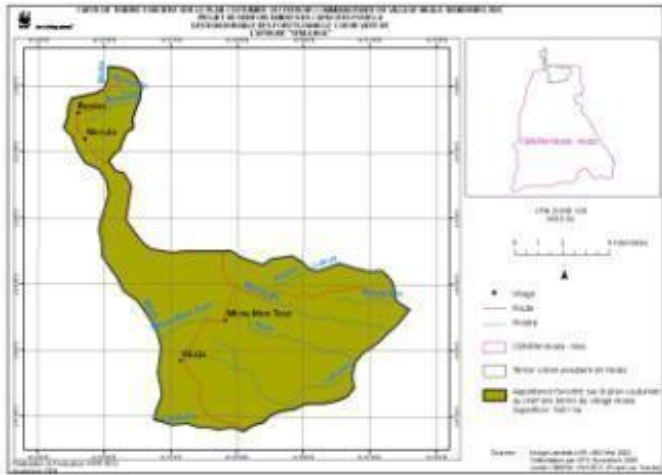

1. Organization and democratic structuring of rural population
2. Sensitization and FPIC
3. Participative zoning and customary rights recognition (village level land management plans)
4. Integration into Territorial level land use planning and validation of local land use plans
5. Identifying economic alternatives to current practices and proposing sectoral activities to be implemented
6. Signing of a PES contract for the implementation of village land management plan.

5.3 Land use planning process

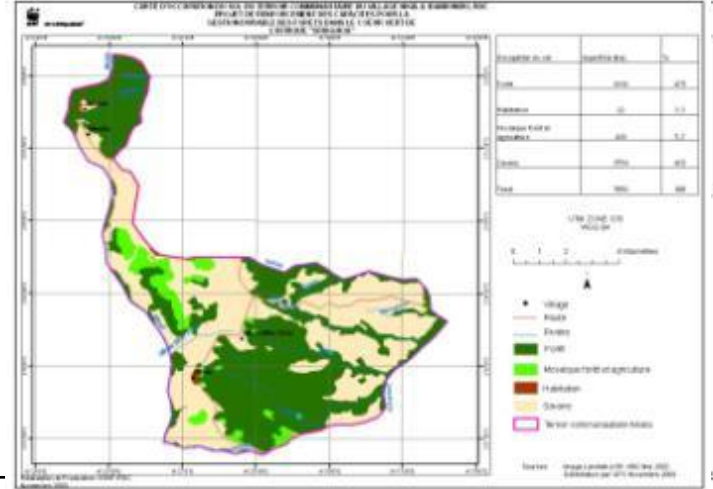

5.3 Enabling activities under the proposed ER Program: village level land management plans

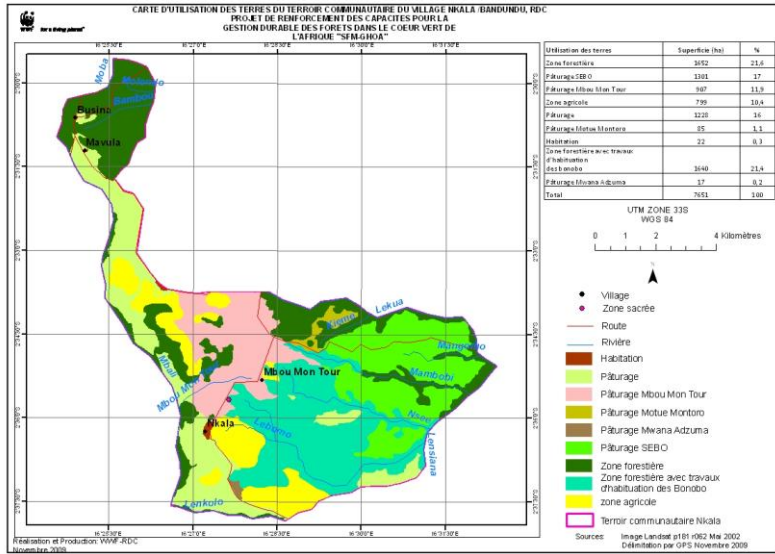

Step 1- Assessing customary land rights recognized by the within the community and by neighboring communities

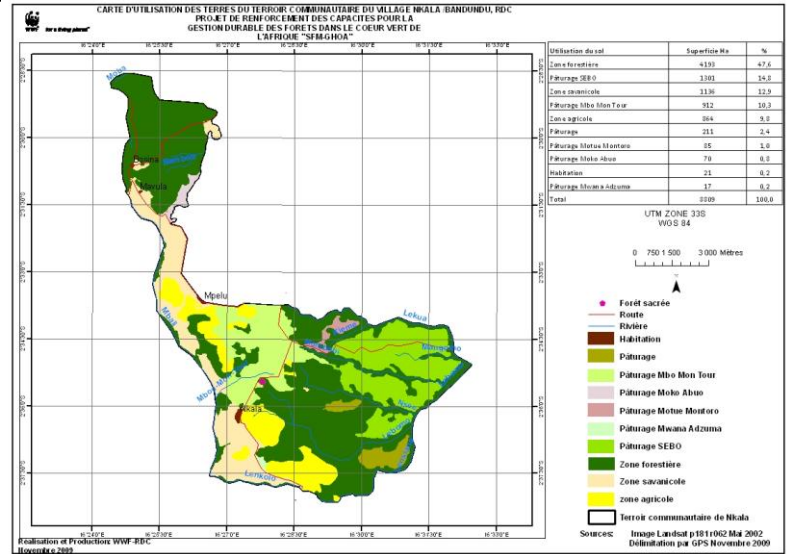

Step-2 Using satellite imagery to create a land cover map

Step-3 Create a baseline land use map

Step-4- make a simple management plan for the village for the next 5 years

5.3 Sectoral activities under the proposed ER Program

- Agroforestry on degraded land to sustainably produce food and fuelwood.
- Agricultural intensification using cash crops where possible as a strategy to phase out slash and burn agriculture (palm oil, coffee, cacao)
- Bush fire control
- Community forestry
- RIL and Forest certification
- Access to markets (contract planting)
- Improved value chain

5.4 Activities to address risks of reversal (non-permanence) of greenhouse gas benefits

5.5 Description of the potential risks of domestic and international leakage

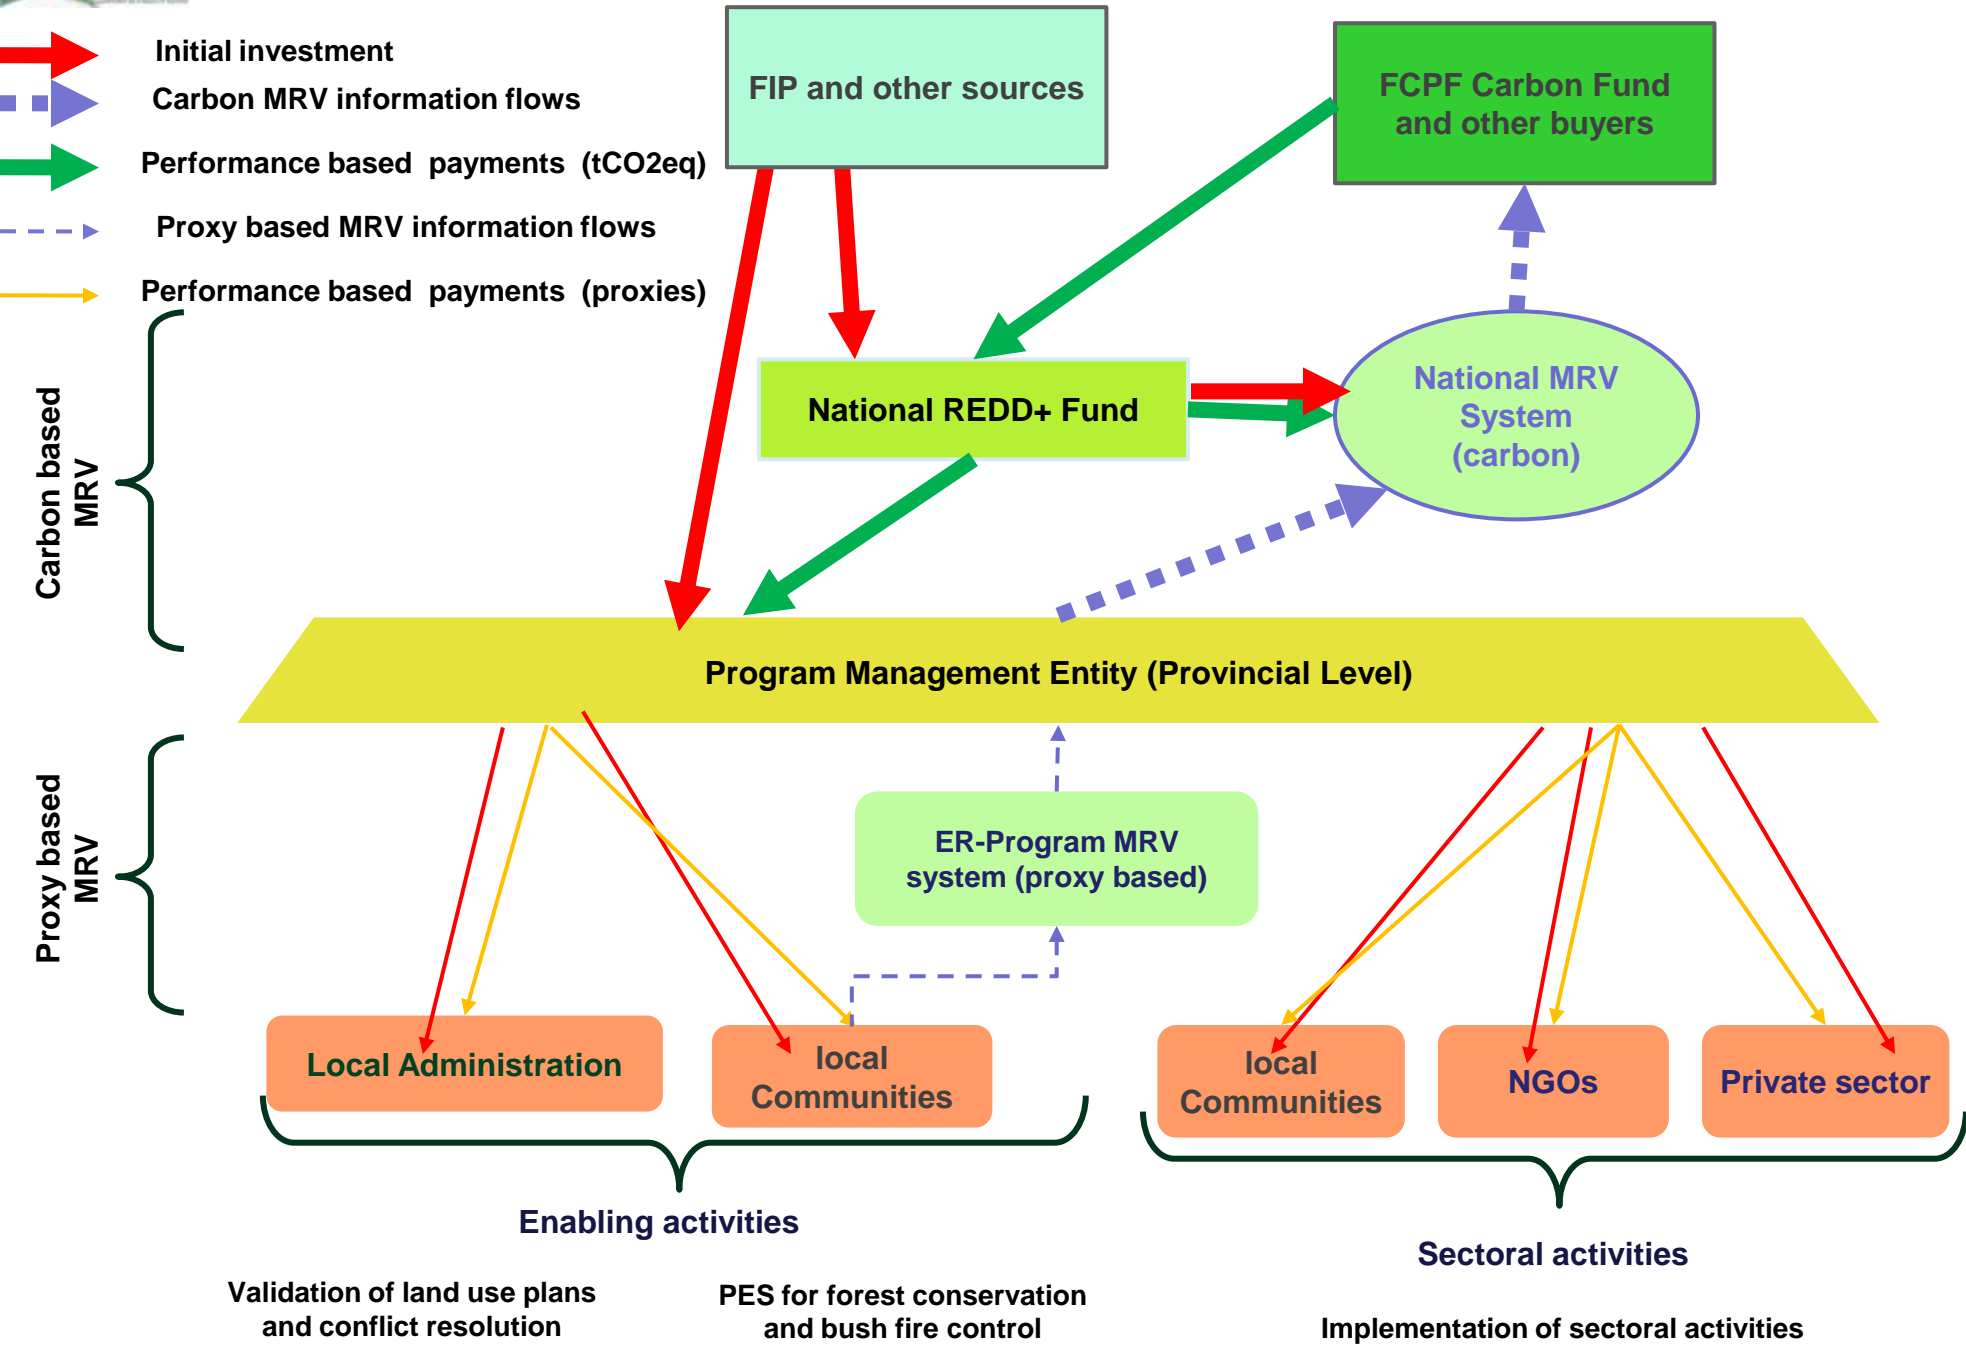

➤ Permanence

- ✓ The strategy is aimed at addressing the drivers of deforestation and hence generate permanent ERs.
- ✓ A National buffer system is being envisaged

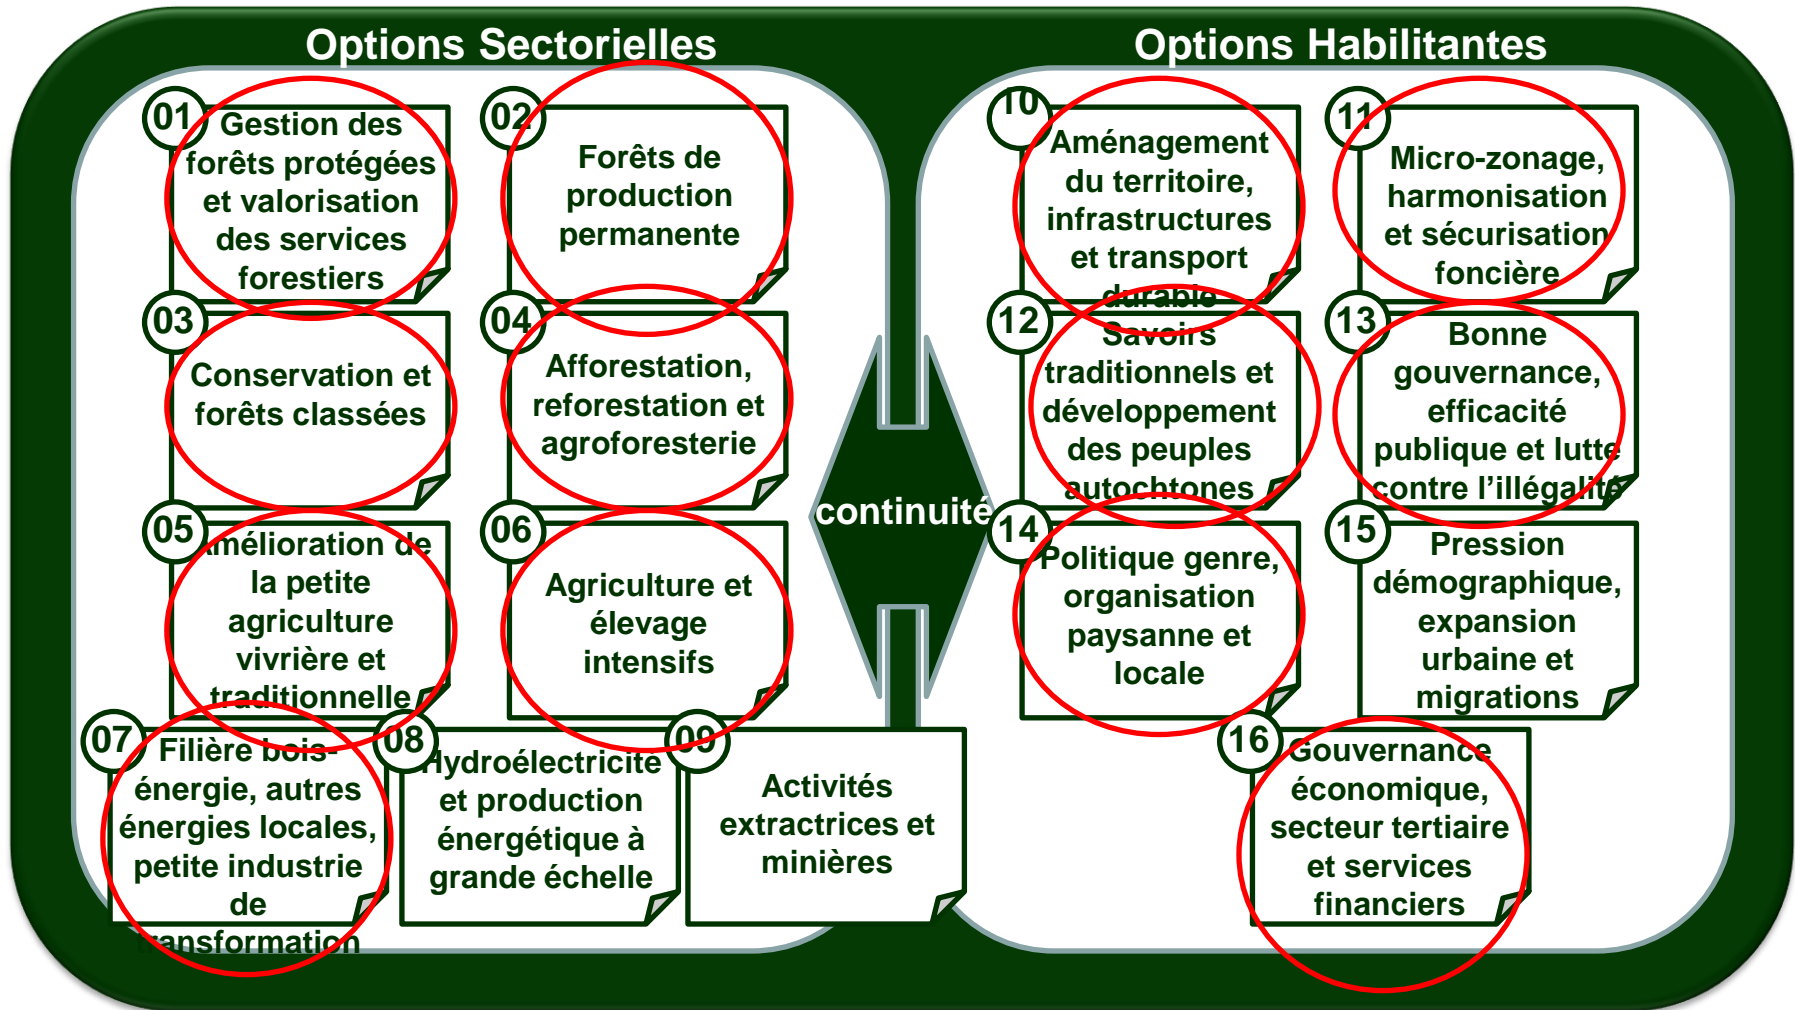

➤ Leakage

- ✓ Strategy is aimed at improving efficiency (agriculture and fuelwood)
- ✓ will be monitored (activity data for Bandundu will be produced as part of the national MRV system)

6.2 REDD+ Implementation Framework: from investment to operation

6.3 Consistency with national REDD+ strategy

The program looks to implement activities relevant to 13 of the 16 Thematic areas of a future national REDD+ strategy

6.4 National registry

Full Integration of ER-Program Data into the National Forest Monitoring system for REDD+ :

1. REDD+ Registry
2. Terra Congo (satellite land monitoring system)

Preliminary assessment of the proposed ER Program in the context of the national SESA

ER-Program activities	Risk Factor
<i>Alternatives to slash and burn</i>	<ol style="list-style-type: none"> 1. <i>Traditionnal practices well entrenched</i> 2. <i>Lack of knowledge about alternatives</i>
<i>Alternatives to woodfuel</i>	<ol style="list-style-type: none"> 1. <i>Low cost woodfuel is accessible</i> 2. <i>Lack of knowledge about alternatives</i>
<i>Forest Management and land-use planning</i>	<ol style="list-style-type: none"> 1. <i>Lack of political will</i> 2. <i>Lack of capacity in the face of the significant expertise required</i>
<i>Governance of REDD+, Forest sector governance and communications</i>	<ol style="list-style-type: none"> 1. Governance of the REDD+ process : <ol style="list-style-type: none"> a. <i>Corruption and misuse of funds;</i> b. <i>Lack of ownership at the national, provincial and local level increasing permanence risk</i> c. <i>Environmental monitoring and result based payment are new and run counter to current practices;</i> 1. Forest sector governance : <i>Illegal loggin activities go on;</i> 2. Communications : <i>Risks of non-appropriation if messages are too complex;</i>

7.2 Incorporation of SESA outputs and/or outcomes into the proposed ER Program

- ER-Program will use the ESMF developed by the SESA to ensure its socio-environmental compliance
- Particular importance will be given to the integration of the socio-environmental MRV framework developed by the SESA with the proxy-based MRV system for PES.

8.1 Stakeholder engagement to date on the proposed ER Program

- ER-Program orientation note Mai Ndombe, initially presented in Cancun in December 2010
- Numerous consultations in Bolobo Territory through NORAD's R-PAN project implemented by WWF since 2010 (micro-zoning is already underway).
- Consultations in the elaboration of the FIP investment plan during 2011
- Numerous consultations in the South of Kwamouth Territory through Novacel Sud-Kwamouth pilot project 2011-2012.
- Field mission of the National REDD Coordination Mai 2012
- Seminar with Provincial Government on ER-Program (Mai 2012)

8.2 Planned outreach and consultation process

- FIP and REDD pilot project consultation plans will be implemented
- Based on firm commitment from the FCPF Carbon Fund, consultations specific to the ER-program will be planned with local actors (communities, CSOs and Private sector)
- It is expected that World Bank due diligence will be applied

8.3 Dispute resolution mechanisms

- The local administration expects to play an important role in the conflict resolution process.
- The National REDD Fund will have a complaints mechanism
- Further reflection on this issue as part of the readiness process

Additional Social and Environmental Benefits

- Proposed strategy is certainly **pro-poor**
 - Based on the village as planning unit
 - Alternatives to slash and burn to improve livelihoods
- High biodiversity value of forest habitat
 - **bonobos**, elephants
- Regulation of water flow vital for Congo River's hydroelectrical potential
 - Southern edge of proposed RAMSAR site

Benefit Sharing

National REDD+ Fund:
Assesses proposals for
program expansion

Investment in
Enabling and sectoral
Activities

MRVed ERs

Implementation Entity:
1-PES to participants based on
contribution to MRVed results
2-Cover program management
costs (5%)
3-Covers proxy MRV system
cost (15%)

FCPF carbon buys
ERs from National
REDD+ Fund

National REDD Fund:
1-Payment to
implementation entity
2-Cover fiduciary
management costs (1%)
3-Covers National MRV
system costs (10%)

10.1 Description of envisioned benefit-sharing arrangement for the proposed ER Program.

Proceeds from the sale of ERs are earmarked to the ER-Program:

- Cover program management costs (fixed %)
- National MRV system (fixed %)
- PES fund of the ER-Program (fixed %)
- Expanding program activities (enabling and sectoral activities within and around the program area)

Performance based payments as MRVed through proxies (PES scheme)

- Area of action (e.g. number of ha under agroforestry, under RIL,)
- Volume of activities implemented (incidence of improved cook-stoves, number of improved kilns)
- Emission Reduction Impact (based on studies)
- Opportunity costs
- Source of investments (public/private)

Reference Level and Expected Emission Reductions: activity based

Activity to be valued

Justification

Reducing unplanned deforestation and degradation*

Main drivers :

- Slash and burn agriculture
- Bush fires for pastures, agriculture and hunting
- Fuelwood and charcoal production ;
- Artisanal logging

Reducing planned degradation

Logging concessions are present in the area

Increasing forest carbon stocks through reforestation and natural regeneration

Intervention Strategy :

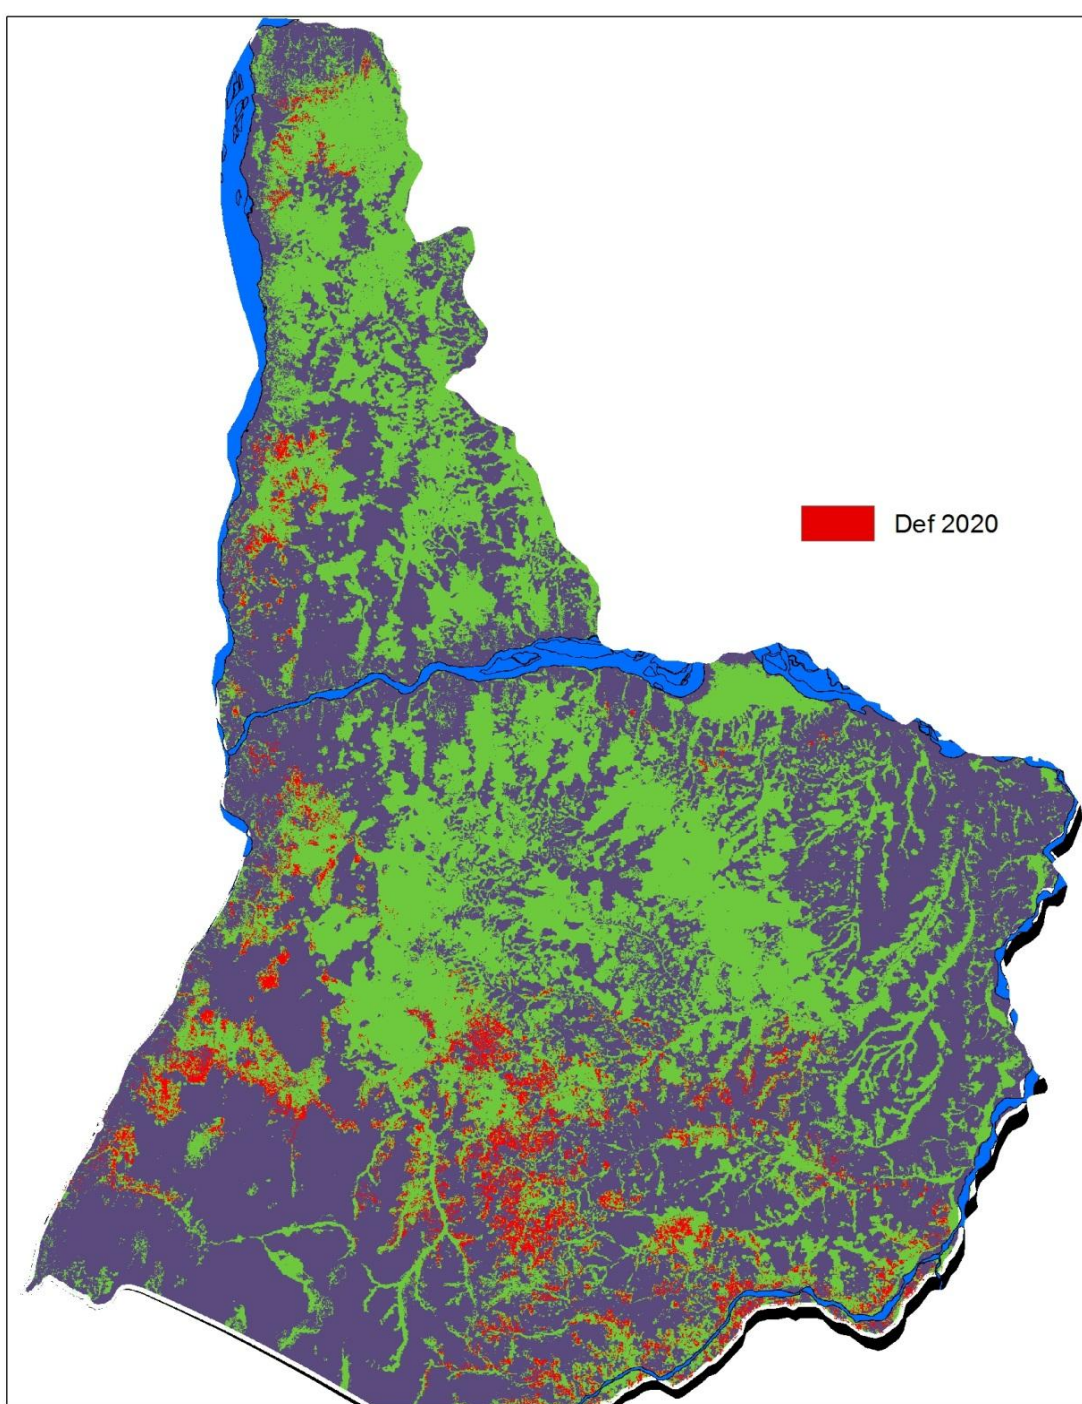

- Natural regeneration through bush fire control ;
- Plantations (agroforestry models)

*Unplanned deforestation and degradation are not separate phenomena as degradation due to fuelwood extraction of illegal logging is generally followed by deforestation due to slash and burn agriculture within a 10 year interval

11.1 Approach for establishing the Reference Emission Level (REL): 3 approaches

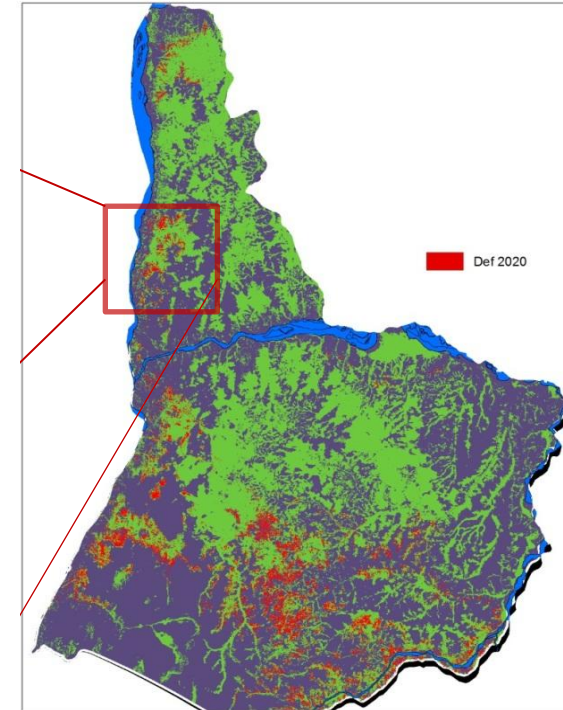

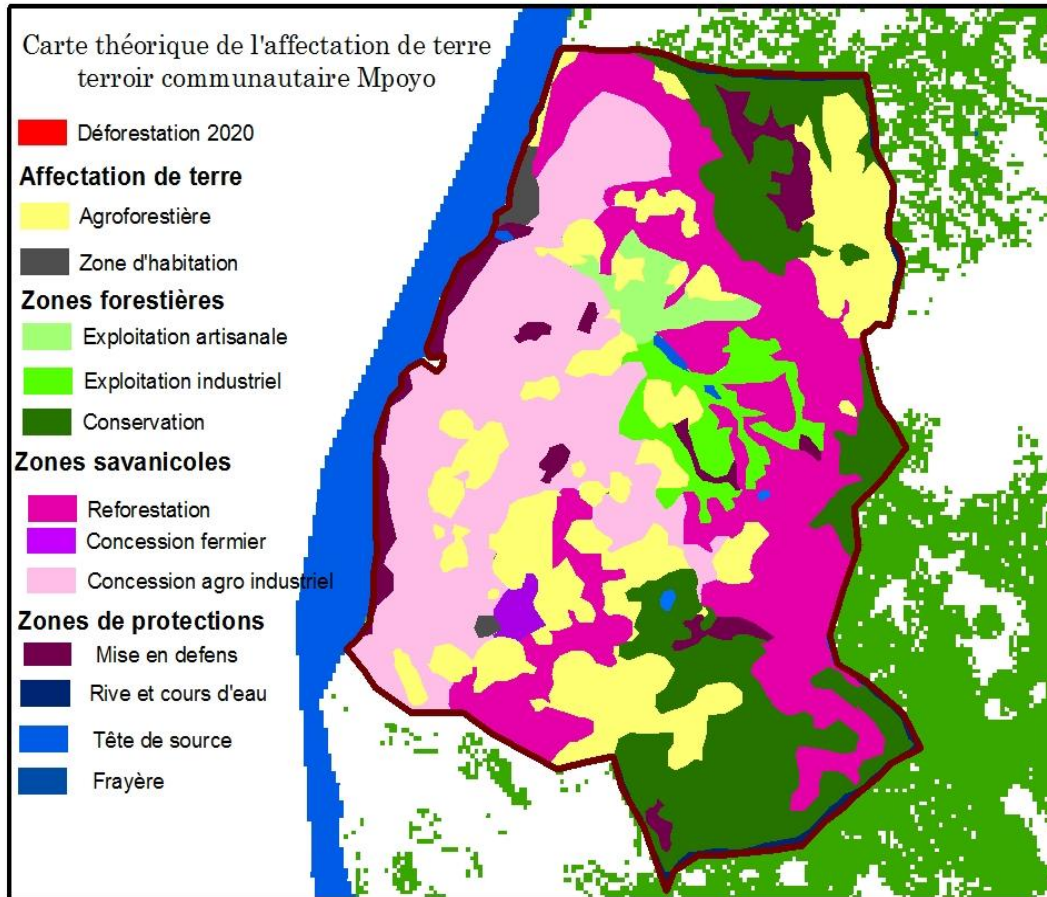

- REL is spatially explicit (deforestation risk map is created)
- Approach 1 : average historical emissions (2000-2010).
- Approach 2 : trend over the last 10 years
- Approach 3: model based on correlations between drivers and observed deforestation to adjust trend.

11.2 Estimate of expected reference emission level/forest reference level

Ministère de l'Environnement,
Conservation de la Nature et Tourisme

REDD+ activity

REL based on Historical data

Unplanned deforestation and degradation

- Forest loss 2000-2010: 75.057ha
- Historical emissions for 2000-2010 comprised between 5,2 and 8,1 millions tC or **19,1 and 29,6 millions tCO₂e**. *

Planned degradation

102 037tCO₂e

Afforestation and reforestation

No BAU reforestation

* lower end assumes deforested areas enter a swidden and fallow cycle

11.3 Emission Reduction Goal (10 year program)

REDD+ activity	Intervention strategy	Agent	Mitigation potential MtCO ₂ e	Effectiveness	Emission reduction goal MtCO ₂ e
Reducing unplanned deforestation and degradation	Conservation	Communities	18,5 and 20	High	13,8 -15,0
	Sustainable forest management			Medium	9,2 -10,0
	Bush fire control				
	Community agroforestry				
	Agricultural intensification			Artisanal loggers and customary chiefs	
Reducing planned degradation	Reducing illegal logging	Artisanal loggers and customary chiefs			
	Reduced impact logging	Forest Concessionaires	0,005	High	0,0045
				Medium	0,004
			Low	0,0035	
ARR	Bush fire control for natural regeneration	SEBO and Communities	1	High	0,7
				Medium	0,6
				Low	0,5
ARR	Industrial agroforestry	NOVACEL and other private cies	1,2	High	1,0
				Medium	0,9
				Low	0,75
TOTAL			20,8 to 22, 8	High	16-18
				Medium	11-10
				Low	5,9-6,4

11.4 Expected ERs, assuming medium effectiveness (50% averaged over program lifetime) and linear improvement in this effectiveness

The statistics are based on FACET data

11.5 Volume proposed for the FCPF Carbon Fund

- DRC is interested in attracting other buyers
- Implementing partners will be looking for assistance from the World Bank team for the marketing of potential ERs as well as in the negotiation of additional ERPAs.

13.3 Next steps to finalize the proposed ER Program implementation design

2012-2013:

- Institutional arrangements: creation of the National REDD+ Fund, agreement between institutions providing funding for the investment phase and the National REDD+ Fund in charge of the operation phase
- Feasibility studies and Sensitization of stakeholders
- R-package submission

2014-2015:

- Negotiations and contracting with main implementation partners following FPIC (based on solid commitments by FCPF Carbon Fund.

Conclusion and next steps

- Many partners already working together with strong leadership from the MECNT and strong support from UN-REDD, FCPF and WWF.
- Government looking to create strong synergies with the FIP
- Looking to finish a draft ER-PIN during 2012 or early 2013
 - ✓ Preliminary studies (drivers, RLs and MRV needs)
 - ✓ strategy operationalisation and institutional structure
 - ✓ Definition of a common approach with all stakeholders
 - ✓ Financial Analysis (relative to secured investments)
- Government willing to commit resources from ongoing projects to support the development of this program at an initial stage but will be looking for funds to support detailed program development.

Merci pour votre attention

activities	indicators	MRV	Contract modalities	Paiment modalities
reforestation	ha planted and maintained according to quality standards	Area: remote sensing or GPS cameras	1 to 5 years	\$/ha vérified paid annually
agroforestry	ha planted and maintained according to quality standards	quality: GPS Photos and filed visits	5 years	\$/ha vérified paid annually
Bush fire control (assisted natural regeneration)	ha without fire at the en of the dry season	(using ODK where capcity exists)	5 years	\$/ha vérified paid annually at the end of the dry season
Improved agricultural practices	ha planted and yields	Multiples levels of verification including field visits	1 year renewable (conditionnal to respect for village land management plan)	\$/ha vérified paid annually
Simple land management plan at the village level	ha conserved vs. village reference level		5 years	\$/ha vérified paid annually
RIL and SFM (artisanal and industrial)	ha under RIL and SFM		25 years	\$/ha vérified paid every 5 years

10.2 Progress on benefit-sharing arrangements

- Apply internationally recognised social and environmental standards until national ESMF and National Standards are in place and fully operational as we advance on readiness.
- REDD+ registry will be capable of tracking benefits sharing agreements as well as progress on their implementation by the end of 2012.
- Innovative technologies could be developed to deliver financial flows down to the local level (reducing opportunities for corruption, increasing strict conditionality in the delivery of payments).
